

Socio-economic and environmental performance of small-scale and mild fruit and vegetable processing technologies

Zicari A , Mathijs E, Avermaete T, Vranken L
University of Leuven, Department of Earth and Environmental Sciences

Abstract

Food represents one of the most important commodities for human beings, but its production and processing can put pressure on the environment.

The technical and technological development has made possible to bring hundreds of millions of people out of hunger (although the problem of hunger in the world is still currently one of the main challenges in the achievement of the Sustainable Development Goals SDGs for 2030) but the larger availability of food as a merely result of an economy-of-scale production and distribution raised several issues on its social and environmental sustainability.

In the framework of Horizon 2020, the FOX (Food processing in a Box) project will design, model and assess four innovative and flexible small-scale food processing technologies in six European transnational regions.

Introduction

In the recent years, with the advent of internet and with the so-called democratization of knowledge, consumers have become increasingly aware about the critical issues correlated with the current way to produce and process food (i.e. the transport of food over long distances, the overexploitation of resources and the exploitation of labor, the possible import of exotic diseases, the pressure on the environment, etc.) and because of that, a considerable amount of people began to take in consideration the environmental impacts of food products as one of the essential factor in purchasing a product.

Hence, the ethical and ecological awareness, starts to act as an essential compass when choosing a product with the consumers that indicate a preference for these products showing a better environmental performance.

As a consequence, consumers demand for locally grown and mild processed food products rose, resulting in new technological challenges for those companies involved in the food processing sector (i.e. producing food, in a profitable way, which is both mildly processed, safe and nutritious).

It appears that, until now, not many studies looked at mildly and minimally processed food (and at the related processing technologies and machineries). The few studies that exist looked at limited sustainability dimensions (without taking in consideration all the important aspects such as environmental and socio-economic impact at the same time) and came with contrasting results.

Nevertheless, the new technologies are expected to permit the production of high quality and mildly processed food products with better nutritional characteristics in a more sustainable way.

Methodology

A socio-economic and environmental impact assessment of these new technologies is being currently done.

The potential economic benefits are being assessed through the integration of economic data and business models in a so-called LCC (Life Cycle Costing) analysis. The analysis will include data regarding the commercialization in local markets of the products processed with the four new innovative and flexible technologies, data about investments and costs (direct, indirect, fixed, variable, opportunity, etc.) and data about potential business opportunities. For the social benefits, potential job creation and local workforce use in the six European transnational regional areas will be assessed.

In order to consider all the possible environmental aspects, impacts and issues and in compliance to both the ISO 14040 and ISO 14044 directives, an LCA (Life Cycle Analysis) is being carried out for all the four innovative technologies presented in FOX. The impact of the final products developed with the FOX processing technologies is being compared with the impact of some alternative products.

First, a Life Cycle Analysis regarding the identified alternative products has been carried out. For every food product, five stages of the supply chain have been identified and analyzed:

Work Package 3 - ANNA Innovative quality analysis and sustainable packaging for fresh fruit and vegetable products			
Product: Fresh cut ready to eat snack made of carrot, melon, cucumber and sweet peppers			
Healthier and more environmentally friendly options:	Unhealthier but comparably environmentally friendly options:		
1) Fresh sticks locally produced	2) Standard (not home-made) ready-to-eat		
3) Fresh vegetables locally produced	4) Standard (not home-made) ready-to-eat		
Comparably healthy but less environmentally friendly options:	Unhealthy and less environmentally friendly options:		
5) Fresh imported (not locally produced)	6) Standard (not home-made) ready-to-eat with imported fruit		
7) Fresh imported vegetables not locally produced	8) Standard (not home-made) ready-to-eat with imported fruit		

Production stage

(agrochemicals, fertilizers transportation from the farm, water/energy consumption).

Processing stage (packaging, transportation, water, fuels, and electricity consumption).

Retailing stage (transportation to the shops, secondary packaging, water, fuel, chemicals and electricity consumption).

Consumption stage (transportation, water/electricity consumption).

Disposal stage (waste collection and processing).

Then, a Life Cycle Analysis of the four innovative and flexible technologies intended for mild processing has been carried out in order to compare the two different environmental performances.

Data regarding the alternative products have been retrieved from the scientific literature while data regarding the case-study technologies have been collected from research partners which designed and which are currently developing the technologies. In order to do so, a proper protocol for data gathering has been developed:

Label	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 1	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 2	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 3	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 4	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 5	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 6	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 7	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 8	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 9	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 10	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 11	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 12	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 13	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 14	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 15	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 16	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 17	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 18	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 19	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 20	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 21	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 22	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 23	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 24	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 25	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 26	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 27	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 28	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 29	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 30	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 31	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 32	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 33	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 34	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 35	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 36	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 37	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 38	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 39	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 40	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 41	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 42	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 43	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 44	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 45	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 46	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 47	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 48	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 49	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 50	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 51	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)

Label 58	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 59	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 60	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 61	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 62	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 63	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 64	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 65	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 66	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 67	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 68	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 69	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 70	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 71	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 72	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 73	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 74	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 75	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 76	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 77	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 78	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 79	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 80	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 81	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 82	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 83	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 84	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 85	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 86	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 87	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 88	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 89	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 90	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 91	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 92	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 93	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 94	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 95	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 96	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 97	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 98	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 99	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)
Label 100	Content of the label (i.e. name, description, etc.)	Weighting	Environmental impact (i.e. GHG, etc.)

Results

The final outcome will be a socio-economic and environmental impact assessment of the four innovative small-scaled food processing technologies. A preliminary life cycle assessment of all the alternative reference products has been already carried out

In the picture above, the results regarding the production stage of 32 alternative reference products are shown while in the picture below the results regarding the processing stage are shown.

The first technology has been already compared with an alternative processing technology using some preliminary data. For three of the environmental impact categories, the difference between the innovative and the standard technologies appear to be less than 1%

For ten, it appear to be less than 2%

For three, it appear to be less than 5%

Conclusion

The preliminary results regarding the comparison between the environmental performances of the first of the four technologies with a possible competitor already established on the market do not seem to show significant differences. For three categories of environmental impact out of sixteen, the difference is less than 1% (water resource depletion: 0.5%, freshwater eutrophication: 0.8%, terrestrial eutrophication: 0.8%). For ten categories of environmental impact out of sixteen, this difference is less than 2% (mineral, fossil and resource depletion: 1.8%, marine eutrophication: 1.9%, acidification: 1.3%, ionizing radiation E: 1.3%, ionizing radiation HH: 1.3%, particulate matter: 1.8%, human toxicity cancer effects: 1.1%, human toxicity non-cancer effects: 1.3%, ozone depletion: 1.5%, climate change: 1.3%). Finally, for three of the sixteen categories of environmental impact, a difference was found which, although more substantial, remains below 5% (photochemical ozone formation: 2.1%, land use change: 2.7%, freshwater ecotoxicity: 4.6%).

Although these results suggest a not so significantly better environmental performance of mild processing technologies compared to standard processing technologies, it must be considered that:

A large number of data have not yet been taken into consideration (as at the moment not yet available). The weight (and the consequent effect on the overall environmental performance) that these parameters relating to these data possess is therefore still unknown at the moment.

The results relating to the environmental performance of the other three technologies could show totally different results.

Acknowledgements

We thank Dr. Kemal Aganovic and MSc. Milena Zdravkovic (DIL Deutsche Institut für Lebensmitteltechnik e.V.) for the cooperation in collecting the data needed for the Life Cycle Assessment.

The project leading to this application has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 817683
